

Prof. dr. Amaury Frankl

Physical Geography

amaury.frankl@ugent.be

Professor Amaury Frankl specializes in geomorphology and focuses on researching land degradation in various environments, including alpine, tropical mountain, and temperate lowland regions. Using UAVs, he investigates the impact of anthropogenic disturbances and (extreme) weather events on rates of soil erosion and the triggering of natural hazards. He also explores how nature-based solutions can mitigate erosion from a connectivity perspective. He is co-chair of the Africa Platform of Ghent University Association (<https://www.africaplatform.ugent.be/>), Board Member of the UAV Research Centre (<https://urc.ugent.be/>), Member of the EU Soil Observatory Working Group on Soil Erosion and Associate Member of the Royal Academy of Overseas Sciences.
